Allowable Subject Matter

1. Claims 3, 5-13, 16, & 28-29 are allowed. The following is an Examiner's statement of reasons for allowance: Claims 3, 5-13, 16, & 28-29 are considered allowable since no prior art or combination of prior art discloses or suggest the combination of limitations specified in the independent claims including:

“determining that a connection needs to be established in response to receiving a request for a connection from the installed software application in the attached device, generating a connection type and a connection specification; generating a connection type and a connection specification; providing a single central coordinator in the centralized wired network to manage connections over the network; sending a request to the central coordinator for a connection the request including the connection type and the connection specification; in the central coordinator, granting the request for a connection and assigning a connection identifier (CID) that is unique over the centralized wired network and associating the assigned unique connection identifier with the selected service access point” in combination with other claim limitations as specified in claim 3.

“in the local bandwidth manager, receiving confirmation of the requested bearer channel from the central coordinator; repeating said requesting a bearer channel and receiving confirmation of the requested bearer channel for each additional destination device in accordance with the request for multicast transmission; replicating application data such that a replica exists for each destination device; and transmitting the replicas on the point-to-point connections on the confirmed bearer channels assigned by the central coordinator; wherein each connection is associated with a corresponding service access point of a transport layer of the source device; each connection is associated with a corresponding transport layer port of the transport layer of the source device; and each connection is assigned to a connection identifier that is globally unique throughout the centralized network for use in routing data packet from the source device to selected ports in the destination device” in combination with other claim limitations as specified in claim 13.

“in the local bandwidth manger, responsive to the buffered broadcast message, sending a bandwidth request to a central coordinator attached to the wired network; in the local bandwidth manager, receiving an indication of a bandwidth allocation on a dedicated broadcast channel within the centralized wired network; the dedicated bandwidth channel defined as a logical channel on the common physical wired connection interconnecting all devices attached to the power line communication network; wherein the bandwidth allocation is transmitted from the central coordinator to the local bandwidth manger over a predetermined beacon channel; and then transmitting the buffered broadcast message on the dedicated broadcast channel of the centralized network in accordance with the received indication of a bandwidth allocation so that the broadcast message travels directly over the common physical wired connection from the transmitting device to every other device attached to the centralized network without traversing an intermediary broadcast facility” in combination with other claim limitations as specified in claim 16.
